AVERAGE PERMIT COST	166
BENEFIT TO COST RATIO	166

EXECUTIVE SUMMARY

The Worcestershire Permit Scheme was introduced on 1st June 2019 and this 2nd year report covers the year from the 1st June 2020 to the 31st May 2021. The purpose of this report is to evaluate the impact of the Permit Scheme, its operational performance and give consideration to the fee structure, the costs and benefits of operating the scheme and whether the Permit Scheme is meeting key performance indicators where these are set out in the Guidance.

The Permit Scheme is not intended to prevent activities necessary for the maintenance or improvement of the road network or the services running underneath.

It is designed to make available the necessary resources to achieve an appropriate balance between the interests of the various parties and where possible, bring about effective co-ordination between all the different competing interests.

There are a wide range of indicators and measures that the industry has been discussing and agreeing that should be reported on. Some of these are possible to report on and some require further work or system changes to prepare.

This evaluation identifies all the indicators and measures agreed by the industry, through various representative groups. Although some data is not available currently, the requirement and format has been documented in this evaluation so that it can be identified easily identified and worked in following years.

When the Worcestershire Permit Scheme was being developed a Benefit to Cost Ratio was prepared using predicted costs and anticipated volumes of applications.

Now there are actual costs and volumes assumptions have been rerun using the same network data and the yearly actuals and the results are shown in Table 64 below. This indicates that the Permit Scheme has been more beneficial to society than originally anticipated.

The main reason for this benefit increase is a higher volume in the total Permit applications managed within lower operational costs, along with more accurate recording of volumes and works types.

Table 64 Highway Authority Cost Benefit results			
Highway Authority Assessment	Opening Year	1st Year	2nd Year
5% reduction in works impact	Predicted (NPV Costs)	Actuals	Actuals
Net Present Value of Benefits	£31,296,835	£46,980,361	£119,771,425
Net Present Value of Costs	£1,022,122	£616,526	£763,447
Net Present Value of Scheme	£30,274,713	£46,363,835	£119,007,978
Benefit to Cost Ratio	30.62	76.20	156.88

HIGHWAY NETWORK SUMMARY PERFORMANCE REPORT

One of the anticipated key benefits of any Permit Scheme is an increase in traffic speeds as a result of a reduction in traffic delay or disruption, caused by road works.

Reduced disruption on the highway network is also expected to cause a reduction in collision and a reduction in fuel consumption and associated CO2 emissions.

However, these measures also need to be considered alongside improvements in other safety developments such as automatic car collision mitigation systems and the ongoing introduction of electric vehicles.

Details on the calculation process is provided in the Authority Measures section below.

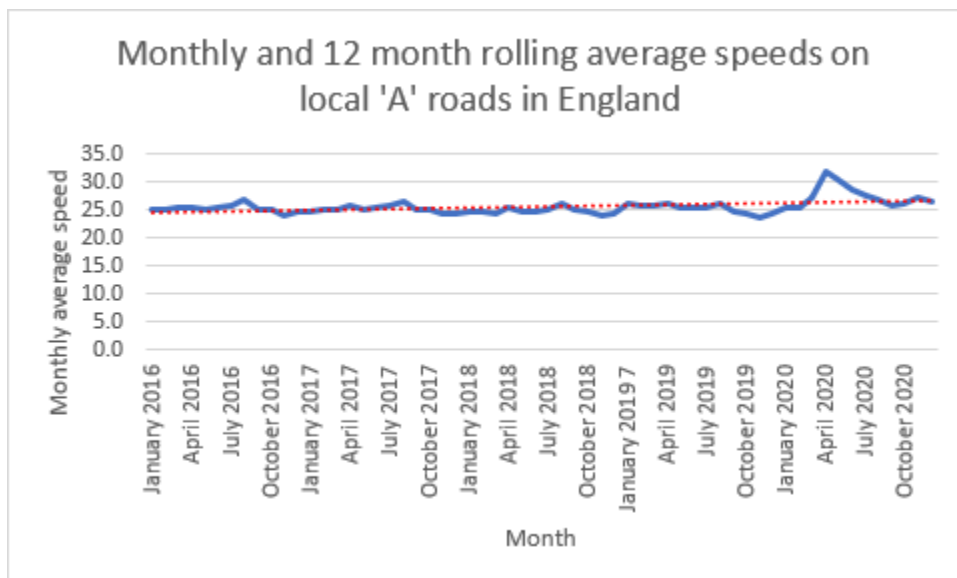

In summary, during the first year of operation of the Worcestershire Permit Scheme these impacts listed below were seen.

However, the COVID-19 pandemic had a huge impact on traffic flows which fluctuated during the year.

Therefore, it is not possible to attribute these impacts to the scope of the Worcestershire Permit Scheme.

- Traffic flow (the average number of vehicles travelling along a given stretch of the road network per day)
 - In year 1, the data shows that traffic flows remained the same.
 - In year 2, the data shows that traffic flows have decreased by 23%.
- Journey Time Reliability and Average journey times
 - For Year 1, data shows a slight decrease in journey time of 0.04%. When we look at the journey time reliability this shows an increase in fluctuations post-Permit Scheme but this may be due to the increasing number of works on the network alongside the beginning of the Covid pandemic.
 - For Year 2, data shows a decrease in delay of 25%.
- Average Traffic Speed
 - In year 1 and traffic speed increased by 2%.
 - In year 2 and traffic speed increased by 4%.
- Carbon emissions.
 - Data has been collected from the DfT on traffic flow sites on major and minor roads in Worcestershire that identifies 210 locations.
 - In year 2, the data shows that traffic levels have decreased by 23% from 2019 to 2020
 - In year 2, the data shows that there has been increase in traffic speed of 8%
 - The summary data shows that there has a decreased in carbon emissions of 27% during the year
- Collisions
 - There has been a decrease of 7% in collisions compared to 2019 collisions
 - This is a decrease of 20% based on the predicted trends

Across the whole of the UK there was a decrease in delay of 20% and increase in speed of 8%.

Due to the fluctuations during the COVID-19 pandemic it is not possible to confirm that the Permit Scheme has reduced traffic delay on the network.

In addition, due to these fluctuations it is also not able to confirm if journey time reliability has improved.

However, this assessment of the impact of the COVID-19 pandemic on the performance of the highway network in Worcestershire potentially provides useful data on the impact of societal shifts such as more home working and home shopping, although this will no doubt be analysed nationally for years to come.

PERMIT SCHEME SUMMARY PERFORMANCE REPORT

This report provides evaluation findings of key indicators and measures for the Worcestershire Permit Scheme after its first 2 years of operation.

Overall, and considering the impact of the COVID-19 Pandemic, the Worcestershire Permit Scheme has been designed and implemented extremely well.

Extensive additional experience has now been gained by the team on how Permit Schemes operate, and nationally, legislation and guidance is being updated.

It is important to note that during the past 2 years there have been major IT system changes nationally and Permit Teams have been transitioning to the DfT's Street Manager system and a variety of existing systems and interfaces have been developed and tested. This has resulted in some gaps in the data seen below.

This situation is expected to resolve itself over the next couple of years resulting in increased data allowing increased analysis and management focus.

During the first year of operation 21,841 Permit applications were received from Utility Promoters and Highway Authority Promoters and this increased in the second year of operation to 25,253.

Permit applications have increased by circa 30% over the past 2 years and considering this has been seen during the COVID-19 Pandemic further increases are a possibility.

26% of applications were from the Highway Authority, up from 20% in year 1. This is generally within the range expected for Highway Authority works and increase may be a result of the change in Utility works planning and staff availability during COVID-19 along with the highways team taking the opportunity to increase maintenance works due to reduced traffic volumes.

This total includes applications that were granted but subsequently cancelled by the Promoters before the works were undertaken.

1,816 Permits were refused in year 2 for various reasons which is 7% of applications. This is down from 20% in year 1 and a low percentage. This will be monitored post COVID-19 as it may be a result of staff availability along with increased work volumes. It may also be a result of better-quality applications from Promoters reducing the need for refusals. The Permit team can refuse a Permit application when they consider that elements of the application (e.g. timing, location or conditions) are not acceptable.

Only 89 permits deemed (automatically granted without consideration by the permit team) out of 25,253 applications which is a remarkable achievement, especially when considering the challenges COVID-19 has presented.

9,690 variations to granted permits requests were received which is circa 10x higher than expected using the DfT's standard volume matrix tool. It is a common occurrence across the industry, so this is in-line with the number anticipated by the consultant.

87% of these variations were granted, up from 79% in year 1 with only 15 deemed, which again, is a remarkable achievement by the team.

42,960 conditions were attached to Permits down from 54,168 in year 1. This is a very positive indicator and normally demonstrates that Promoters are considering the

impact of works and agreeing how they will be undertaken with the Permit team. Again, this will be monitored post COVID-19.

1,931 inspections to monitor the compliance with agreed conditions were undertaken of which 440 were non-compliant. This is a lower volume of inspections than the consultant would consider ideal but with COVID-19, not unexpected. The non-compliance rate at circa 30% is slightly higher than the consultant would expect to see so needs ongoing monitoring.

The average individual Permit cost to Utilities was £38 in year 1 and increased to £41 in year 2. This is very efficient with figures of £40 to £60 seen on average by the consultant.

Second Year Issues

The impact of the COVID-19 pandemic has been a major issue for all Authorities to manage.

The IT system's ability to produce reports consistent with the industry's agreed indicators and measures has improved considerably as can be seen in the table below.

Historically, the industry has agreed on a range of reports that none of the system providers have been able to fully produce.

The central government initiative to develop a new single central IT system called Street Manager is replacing or complimenting current providers and will hopefully continue to improve KPI reporting requirements in future years.

Staffing

Following previous restructuring and ongoing recruitment the Permit Scheme is fully resourced and is expected to continue to be fully resourced in 2021/22.

Inspection and enforcement resources and operations are being monitored and will continue to be a focus of the Highways Management Team. This is to ensure compliance with agreed conditions and required working practices is delivered on the network, minimising disruption wherever possible.

Operational Costs

£1,203,497 of Permit and Permit Variation fee income was received over the full financial year.

Due to the increase in volumes the fee income was 14% more than costs.

A surplus will be carried forward and expected to be absorbed by ongoing increases in IT expenditure and cost inflation.

As fee income is anticipated to be the same or less than costs over the next several years, no consideration will be given changing Permit fees in 2021/22.

See table 62.

Conclusions

The consultant rates the Worcestershire Permit Scheme as EXCELLENT.

The team consistently co-ordinate all road and street works in Worcestershire and take the time to review each and every application and apply conditions to minimise the impact of the works on the users of the network.

As the Permit Scheme has been managed very well and costs and fee income are aligned there is no need to consider an adjustment in fee rates.

There are still some difficulties gathering accurate data from the IT system but this has improved considerably.

The Permit team and Promoters will continue to work together and make improvements to minimise the impact of works on the highway network.

Works are being Permitted and co-ordinated effectively and this has resulted in the network being managed to the best of the team's ability with the tools available to them.

The introduction of the Permit Scheme has led to a better control of the entire highway network and of all the works undertaken on it.

Looking Forward (Recommendations)

The Permit Scheme is properly set up so it will continue to maintain its effectiveness over the following years with a focus on these key areas.

- Monitor network performance post COVID-19 and how elements such as journey times and reliability are impacted by traffic volumes and disruption caused by activities on the highway.
- Consider a Lane Rental Scheme to reduce works durations at busy times and therefore network disruption. This initiative can also potentially produce considerable additional financial resources for network improvement and further disruption reduction.
- Monitor the DfT's new Street Manager system and feedback the need to improve data recording and reporting.
- Continuing staff training and development.
- Consider increasing the resources available to ensure the full volume of inspections is undertaken.
- Consider increasing the resources available for monitoring of breaches and the subsequent issuing of penalties. Following this, monitor positive behavioural changes (improved compliance with conditions and other requirements) that have resulted so the impact of the resources can be assessed.
- Consider how the Permit Team can support other initiatives within the Highway Department such as programmes to assess the level of compliance with Specification of the Reinstatement of Openings in Highways (SROH).

Permit Scheme Objectives

The Worcestershire Permit Scheme's primary objectives are:

Worcestershire County Council Permit Scheme Yr2 Evaluation V2

- To increase the efficient running of the highway network by minimising the disruption and inconvenience caused by road works and other highway events and activities through proactive management of activities on the highway
- To improve the quality and timeliness of information received from all activity promoters to increase and improve the publicly available data for integration into the Council-wide travel information
- To encourage a proactive approach to planning and undertaking of works on the highway from promoters and thus lessen the impact of activities on road users
- To protect the structure of the street and the integrity of the apparatus in it
- To ensure safety of those using the street and those working on activities that fall under the Scheme, with particular emphasis on people with disabilities
- To ensure parity of treatment for all activity promoters particularly between statutory undertakers and highway authority works and activities

APPENDIX 1 - EVALUATION BACKGROUND

Permit Scheme Evaluation

Swift Argent Ltd was commissioned by Worcestershire County Council in 2018 to design a Permit Scheme suitable for the City. Following successful implementation in April 2020 Swift Argent Ltd was commissioned to evaluate the performance of the first year of the Permit Scheme as a requirement set out in The Traffic Management Permit Scheme (England) (Amendment) Regulations 2015 regulation 16A.

The Permit Scheme was implemented on 1st March 2020 and the purpose of this report is to evaluate the Permit Scheme and give consideration to the fee structure, the costs and benefits of operating the Scheme and whether the Permit Scheme is meeting key performance indicators where these are set out in the Guidance.

Scope of Work

In order to evaluate the performance of a Permit Scheme a number of data items are required to enable analysis.

All data should be readily available within the street works IT system of the respective Highway Authority. Financial information should be available from the Authority finance department and certain data is collected from DfT statistics.

Ideally, annual performance data should be collected monthly throughout the year to enable changes and trends to be observed time. This could also be useful to enable regular checks to be made internally against key targets so this can be managed and responded to quickly. The response can include further training of the Permit Team to ensure consistency and outcome focused activities.

The individual data items are set out later in this report for each indicator but will include the following categories.

- Number of Permits granted, modified and refused
- Conditions applied for
- Variations and extensions and early starts
- Location of roadworks
- Permit fees
- Operational costs
- Travel times and reliability
- Carbon Impacts

As part of the initial assessment for the introduction of a Permit Scheme and the subsequent application to the Secretary of State for Transport or preparation of a Local Order, the Highway Authority is required to conduct a Cost Benefit Analysis (CBA) on the likelihood of a Scheme to deliver value for money to society (as a benefit to cost ratio).

This CBA is based on the principles of the Department for Transport's New Approach to Transport Appraisals (NATA) framework and include broad assumptions on the costs and benefits of a Permit Scheme. This gives a base in order to make assessment of aims to be achieved.

Key Performance Indicators

A set of Key Performance Indicators (KPIs) and Objective Measures (OMs) are set out below to demonstrate parity of treatment between works for road purposes and street works undertaken by statutory undertakers.

Section 20.3 of the Permits Code of Practice states that every Authority that wants to run a Permit Scheme must explain how it intends to demonstrate parity of treatment for promoters in its application.

The Code contains seven KPIs that could be used for this purpose. The recording of KPIs 1 and 2 is a mandatory requirement of all Permit Schemes.

Authorities should select at least two others which they consider will demonstrate parity across their Permit Scheme. Authorities can also include their own KPIs.

- KPI 1 The number of Permit and Permit variation applications received, the number granted and the number refused. (breakdown of the data into applications granted and refused in relation to highway authority works for road purposes and works by utility promoters, and provide a comparison with the percentage of Permits granted Also, the data is further broken down by activity type into applications granted and refused.)
- KPI 2 The number of conditions applied by condition type.
- KPI 3 The number of approved extensions
- KPI 4 The number of occurrences of reducing the application period (early starts).
- KPI 5 The number of agreements to work in Section 58 and Section 58A restrictions. (Details of Section 58 and 58A restrictions will be provided as required under Section 8.3 of the TMA Code of Practice for Permits.)
- KPI 6 The proportion of times that a Permit authority intervenes on applications
- KPI 7 Number of inspections carried out to monitor conditions

The Statutory Guidance for Highway Authority Permit Schemes October 2015 set out Permit Indicators (TPI) for Permit Schemes are additional to the general TMA Performance Indicators (TPIs), which are already being produced. The TPIs focus on occupancy, co-ordination and inspections, and there for relate mainly to the stages of the works from works start to final conclusion. These additional Permit indicators focus more on the process of Permit applications and responses, prior to the works being carried out.

- TPI1 Works Phases Started (Base Data)
- TPI2 Works Phases Completed (Base Data)
- TPI3 Days Of Occupancy Phases Completed
- TPI4 Average Duration of Works Phases Completed
- TPI5 Phases Completed on time
- TPI6 Number of deemed Permit applications
- TPI7 Number of Phase One Permanent Registrations

In addition to DfT KPIs and HAUC TPIS. The authority can collate its own data. These measures should reflect the business case and objectives put forward in the Scheme submission documentation.

- AM 1 Average duration of works by Permit type
- AM 2 Inspections (% age of total undertaken and failures)
- AM 3 Days of Disruption Saved/ Number of collaborative works
- AM 4 Response Code – broken down by promoter
- AM 5 FPNs (Permit Breaches)
- AM 6 Levels of Customer Enquiries
- AM 7 Average Journey Times (as detailed below)
- AM 8 Journey time reliability (as detailed below)
- AM 9 Road Traffic Collisions (as detailed below)
- AM 10 Carbon Emissions (as detailed below)
- AM 11 Profit/Loss (as detailed below)

Average Journey Times

A key benefit of the Permit Scheme will be to improve operation of the transport network through a reduction in journey times per unit distance travelled due to reduction in delay from roadworks.

It is expected the level of delay in a dense urban network across 12 hours of operation, 10% is estimated to be due to road works, 10% unplanned incidents and 5% control devices with a non-recurrent delay on roads of 25% of total delay.

A 5% reduction in road works would account for a 0.5% reduction in total delay or 10% reduction 1% reduction on total delay.

The DfT publish data quarterly statistical data on road congestion on locally managed 'A' roads and is measured by estimating the average speed achieved by vehicles during the weekday morning peak from 7am to 10am. Average speeds are presented at national, regional and local highway authority level.

Analysis by TfL has determined that on average between 07:00 to 19:00 across the network, delay accounts for about one third of journey times, the remaining two thirds approximates to the free flow or unhindered journey component so that a 5% reduction in roadworks would see an expected improvement of 0.17%.

There are two ways to measure average journey times using this data (a) either comparing passed average journey times before the Permit Scheme and during the Permit Scheme for that authority; or (b) compare Permitted authority to non-Permitted authority local to the area with similar characteristics. The later assumes that all network outcomes are equal and any difference is attributable to the Permit Scheme.

Journey Time Reliability

It is expected that a key benefit of a Permit Scheme will be an improvement in journey time reliability on the network. Journey time reliability is measured using ANPR (Automatic Number Plate Recognition) cameras with some authorities such

as TfL, Essex, Bedfordshire that is an accurate mechanism for monitoring journey times to provide a meaningful measure of overall network performance.

Although ANPR cameras are becoming more of a necessity for highway authorities to prove that traffic management measures are reducing congestion as part of the TMA (Traffic Management Act) these are generally only used for major roads where there is the most congestion.

A further method is to model the relationship between journey time and standard deviation.

This method is suggested in WebTAG and would compare the standard deviation of variability between the Permitted and non-Permitted authorities.

Road traffic Collisions

The presence of roadworks in itself has a higher rate of collisions due to queuing traffic and driver frustration causing erratic behaviour. There are a number of measures that are used to minimise confusion and risk to drivers that can result from better management through a Permit Scheme in addition to the reduction in roadworks themselves.

This may include approval of traffic management plans, better signage, diversion routes, average speed cameras, reduced duration and disruption.

Accidents on the public highway in Great Britain, reported to the police and which involve personal injury or death are recorded by police officers onto a STATS 19 report form with information relating to that accident.

The DfT is responsible for collection of STATS 19 data and forms the basis for annual statistics and is updated quarterly for all local authorities. To measure the effectiveness of a Permit Scheme on road traffic collisions data can be analysed for the Permitted authority before and after the Scheme start and compare trends with non-Permitted authorities.

Carbon Emissions

An outcome of reduced congestion is the reduction in fuel consumption and CO₂ emissions. The fuel consumption that causes CO₂ emissions is very sensitive to several factors and include driver behaviour, vehicle, road types and traffic conditions.

Due to multiple variables a comprehensive carbon model is used as a methodology to accurately estimate how congestion reduction will reduce CO₂.

A typical driving trip consists of idling, accelerating, cruising, and decelerating. An average trip would produce about 330 grams per mile (g/mi) of CO₂ emissions. The figure below shows a typical speed emission curve and shows at lower speeds with high accelerating and decelerating in congestion has much higher emissions.

As speed increases congestion decreases.

On motorways with speeds above 65mph emissions increase as engines are under strain.

Average Speed Over CO₂ Emissions

Source: TRAFFIC CONGESTION AND GREENHOUSE GASES BY MATTHEW BARTH AND KANOK BORIBOONSOMSIN

The National Transport Model (NTM) is the Department for Transport's main strategic policy testing and forecasting tool used to forecast traffic levels and the subsequent congestion and emissions impacts on the national road network of Great Britain (GB).

Curves for 'ultimate' CO₂ emissions can be derived directly from the fuel consumption by converting the units from litre/100km to g fuel/km and applying a simple conversion factor based on the carbon content of petrol and diesel fuels. To calculate fuel consumption as set out in WebTAG the following

Fuel consumption is estimated using a function of the form: $L = a/v + b + c.v + d.v^2$

Where:

L = consumption, expressed in litres per kilometre;

v = average speed in kilometres per hour; and

a, b, c, d are parameters defined for each vehicle category.

The revised fuel consumption aggregated equation for WebTAG vehicle groups was derived (TRL unpublished report "Fuel Consumption Equations" dated 29 September 2008) using the results from the New UK Road Vehicle Emission .

Parameters for each vehicle category are set out in Tab;e A 1.3.8 of WebTAG as shown on Table 1 below.

Table 1 - WebTAG – Fuel consumption parameter values				
Fuel consumption parameter values (litres per km, 2010)				
Parameters				
Vehicle Category	a	b	c	d
Petrol Car	0.96402	0.04145	0.00005	2.01346E-06
Diesel Car	0.43709	0.05862	0.00052	4.12709E-06
Petrol LGV	1.55646	0.06425	0.00074	1.00552E-05
Diesel LGV	1.04527	0.05790	0.00043	8.02520E-06
OGV1	1.47737	0.24562	0.00357	3.06380E-05
OGV2	3.39070	0.39438	0.00464	3.59224E-05
PSV	4.11560	0.30646	0.00421	3.65263E-05
Energy consumption parameter values (kWh per km, 2011)				
Electric Car	0.12564			
Electric LGV				
Electric OGV1				
Electric OGV2				
Electric PSV				

The DfT have developed a carbon tool to allow local authorities to assess the potential effects of transport interventions on carbon emissions in their area.

The tool will output results on the total change in carbon emissions. The Scheme details are entered into the tool and include the time period, type of road, type of area, region and year affected.

Affected modes are selected and default vehicle mix is used based on speed curves from national derived data. For each affected mode the daily distance and number of vehicles is entered.

The vehicle speeds before and after intervention are recorded. This will generate the CO₂ emissions before and after intervention.

PROFIT / LOSS

The Scheme profit / loss is made up of the staff and operational costs and Permit fee. The maximum charge per Permit type is shown on Table 2 below. The Authority sets their own fee structure reflecting on the potential number of Permits and operational costs.

The operational cost includes the initial start-up costs, additional staff administering and co-ordinating Permit Applications which includes Street Work Officers, Street Work Co-ordinators and Manager(s).

Revised maximum fee structure for each category of works and for a hierarchy of main and minor roads - Road category refers to the reinstatement category of the street under the New Roads and Street		
Work Type	Road Category 0-2 or Traffic-sensitive	Road Category 3-4 and non traffic-sensitive
Provisional Advance	£105	£75
Major works – over 10 days <u>and</u> all major works requiring a traffic regulation order.	£240	£150
Major works – 4 to 10 days	£130	£75
Major works – up to 3 days	£65	£45
Activity Standard	£130	£75
Activity Minor	£65	£45
Immediate Activity	£60	£40
Permit Variation	£45	£35

The profit / loss is the Permit fee revenue minus the operational cost. The result will enable the authority to understand if they are applying the correct fee structure or need to review staff levels.

KPI 2 The number of conditions applied by condition type

Table 15 shows that nearly 54,000 conditions were agreed with works Promoters, with the highest being time constraints and consultation and publicity.

Conditions are attached to applications by the Works Promoter or when requested by the Permit Authority and help deliver the Permit Scheme objectives and societal benefits.

Table 15 KPI 2 The number of conditions applied by condition type

AM 4 Response Code

Information regarding refusals by Promoter is not available from the IT System at this time.

Table 49 AM 4 Response Code—broken down by promoter																		
Promoter	Total	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Previous response codes have been replaced with the table below.

The below table outlines 5 categories for reporting on Permit Refusals and Modification Requests, further refusals codes and sample text are provided for specific refusals reasons within those broad categories. Authorities should wherever possible utilise the detailed codes in preference to the generic codes (e.g.RC11 or RC12 should be used over RC10) as this will drive more meaningful outputs and identify areas of improvement in permit applications, therefore only the codes below should be used to bring National consistency.

Both Authorities and Undertakers can report on this data and use the results to drive improvements in the quality of Permit Applications.

It is very important to note that whatever code is used, the reason for the refusal must be entirely clear. If using the general codes (RC10, RC20), the specific reason must be clearly stated. Please also refer to Regulation 9(10) of the amended Regulations. Equally, all works promoters should be fully aware it is an offence to undertake works without a valid permit.

Each code is worded ambiguously, so the `Highway Authority will need to specify if it requires a refusal or modification.

Worcestershire County Council Permit Scheme Yr2 Evaluation V2

Permit Response Code	Type	Description and Suggested Text
RC10	Missing Information	This would include instances where required conditions have not been provided/are not necessary or conflict. The works description or location information provided is insufficient. Use this code for missing information issues not covered by the below.
RC11	Condition Not Provided/Not Necessary	You have omitted essential conditions for these works. If you still plan to proceed with the activity you must supply the appropriate conditions within the conditions text box. [NAME] [Tel]
RC12	TM Not Received	Please provide the required [illustration/traffic management drawing/works activity footprint] for this activity. Please supply the required plan and submit a new application once you have received approval. [NAME] [Tel]
RC20	Incorrect Details on Permit	This would include where the dates, USRN or primary recipient of the Permit are incorrect. Use this code for incorrect Permit detail issues not covered by the below.
RC21	Incorrect Primary Recipient	You have incorrectly selected XXX as the primary recipient of the permit. If you still plan to proceed with this activity you must submit a new permit application ensuring that you have issued it to the correct permitting authority. [NAME] [Tel]
RC22	Location Issues	Your location description and map coordinates conflict, preventing effective coordination of these works. If you still plan to proceed with the activity you must amend this information. [NAME] [Tel]
RC23	Conflicting Information	You have conflicting information contained within your permit application. You state [Example 1] which conflicts with [Example 2] If you still plan to proceed with the activity you must supply consistent information. [NAME] [Tel]
RC30	Co-ordination Issues	This would include where the works will cause any sort of conflict (e.g with an event.) Use this code for co-ordination issues not covered by the below.

Worcestershire County Council Permit Scheme Yr2 Evaluation V2

RC31	Clash of Works	Your works will conflict with other activities for your proposed dates at this location, and collaboration is not possible. Please submit a new permit application with alternative dates. The conflicting works are estimated to be completed on [XX/XX/XXXX]. [NAME] [Tel]
RC32	Timing of Works	You have not specified the precise [Times/Days] that your work site(s) will be occupying the public highway. If you still plan to proceed with this activity you must supply the necessary timing information. [NAME] [Tel]
RC33	Collaboration / Co-ordination	Your works will conflict with other activities for your proposed dates at this location. Please confirm you can co-ordinate your works with the party who are (Name of Conflicting Promoter). If you still plan to proceed with this activity you must submit a new permit application with alternative dates or an agreement of collaboration. The conflicting works are estimated to be completed on [XX/XX/XXXX] by (XXXXX promoter). [NAME] [Tel]
RC40	Lack of Approval	This would include where TM approval has not been given, an early start has not been sought, the duration applied for is not viewed as acceptable or where the Permit applied for does not reflect prior agreements made. Use this code for general lack of approval or the codes below for a specific issue.
RC41	Incorrect TM	You have not gained the relevant [TM plan/WAF/site meeting] (delete as appropriate) approval for these works. [NAME] [Tel]
RC42	Early Start Agreement	No Early Start Agreement has [not been obtained/not been justified] for this activity. [NAME] [Tel]
RC43	S.58 Restriction	This street is protected by a section 58 restriction. Please provided evidence that you have the relevant agreement to work within this restriction. [NAME] [Tel]
RC44	Duration	The duration is considered to be excessive/insufficient [delete as required] because [XX]. Please specify a duration not longer than [XX] working days. [NAME] [Tel]
C50	Other	Any other reason not covered – As above you must clearly state the refusal reason – this category should be kept to a minimum otherwise the quality of the data can be diluted and made less useful in driving performance improvement.

AM 5 FPNs (Permit Breaches)

Table 50 below shows the number of fixed penalty notices. Under section 74 (7B) failure to give a notice under regulation 74 (charge for occupation of the highway where works unreasonably delayed); under section 19 (1) working without a Permit and under 20 (1) Permit breaches.

There were a total 391 breaches in the first year of the modified scheme.

The Permit Authority will continue to work with Promoters to reduce the number of FPN's.

AM 7 Average Journey Time and AM 8 Journey Time Reliability

One of the anticipated key benefits of the Permit Scheme is an increase in traffic speeds as a result of a reduction in delay to traffic caused by road works.

As set out in the scope in Section 3.4 of this Evaluation, for a 5% reduction in delay, there is an expected improvement of 0.17% in journey time savings.

From September 2015 to March 2021 DfT purchases data about vehicle speeds and journey times from Teletrac Navman.

This data is generated through in-vehicle GPS units as part of the satellite navigation and stolen vehicle tracking services Teletrac Navman provides to their customers. The specific raw data used to derive the Department's journey time statistics consist of 10-second GPS location reports for these vehicles for the period during which their ignition is on.

As part of the service provided to the Department, Teletrac Navman map these GPS location reports to the Ordnance Survey Mastermap and then use this information to reconstruct the routes taken by their customers as they move through the road network.

These reconstructed journeys, combined with the time stamps on the associated GPS location reports, allow Teletrac Navman to estimate the time taken by these vehicles to traverse each route network link. The data also allows journey times to be associated with a particular link direction if the link in question can be traversed in either direction. Where the 10-second GPS location reports don't fall exactly on the start and end of each link, interpolation is used to estimate the time taken by the vehicles to complete each link.

Only data generated from cars, light goods vehicles and heavy goods vehicles are used to estimate journey times. All public service vehicles (e.g. buses) are excluded from the statistics as their frequent stopping/starting would report much slower journey times than actually prevail on the road.

For Year 1, 2018 pre-Permit Scheme and 2019 post-Permit Scheme data is presented on Highway Authority Major roads with average journey times on a monthly basis. Comparing delay of vehicles and traffic speed. Data is shown on Table 52(a) and shows a slight decrease in journey time of 0.04%. If we look at the journey time reliability this shows an increase in fluctuations post-Permit Scheme but this may be due to the increases in the number of works on the network. Table 58(a) shows that traffic flows have remained the same and traffic speed has increased by 2%.

For Year 2, 2019 post-Permit Scheme and 2020 post-Permit Scheme data is presented on Local A Roads and Data is shown on Table 52(b) and shows a decrease in delay of 25% and increase in speed of 4% based on the assumption that all other network

Worcestershire County Council Permit Scheme Yr2 Evaluation V2

outcomes are equal. Table 58(b) shows that traffic flows have decreased by 23% due to numerous lock downs through the Covid pandemic.

In comparing to the whole of the UK there was a decrease in delay of 20% and increase in speed of 8%. Due to the fluctuating effects during the Covid pandemic it is not possible to confirm that the permit scheme has had some effect on reducing traffic delay on the network.

Due to fluctuations, it is also not able to confirm if journey time reliability has improved.

AM 9 Road Traffic Collisions

Road Traffic collisions have been analysed for Year 1, 2018 pre-Permit Scheme and 2019 post-Permit Scheme.

To estimate the predicted collisions post-scheme compared to the actual data collected, trends were analysed from reported collision statistics from 2013-2017 PIA that shows an annual average reduction of 14 collisions or 1.2 per month.

The actual data as shown on Table 53(a) below shows that there has been an increase of 9% in collisions compared to the 2018 collisions and increase of 11% based on the predicted trends.

There are fluctuations in the number of collisions and the true impacts of the scheme would be identified over a longer period of time and as disruption of road works by improved traffic management, signage and diversion routes and less variable speeds reducing the risks to drivers.

For Year 2, 2019 post-Permit Scheme and 2020 post-Permit Scheme.

The actual data as shown on Table 53(b) below shows that there has been a decrease of 7% in collisions compared to the 2019 collisions and decrease of 20% based on the predicted trends.

There has been a similar reduction in traffic flow contributing to a reduced risk of collisions.

AM 10 Carbon Emissions

The result of reduced congestion is a reduction in fuel consumption and CO2 emissions.

Data has been collected from the DfT on traffic flow sites on major and minor roads in Worcestershire that identifies 301 matching locations as shown on Table 54 and 55 for Year 1 with traffic flows by vehicle type. The data show that traffic levels have remained the same between 2018 to 2019.

The average traffic speed from the DfT on Table 56 has been used for comparison. The DfT carbon tool has been used the traffic flow and average speed to predict carbon emissions that is summarized in Table 57.

Table 58 compares output pre-Permit Scheme and post-Permit Scheme.

The summary shows that in Year 1 there has been increase in traffic speed of 2% and carbon emissions have increased by 1%. The increase in carbon emissions is due to the increase in traffic speeds of heavy vehicles.

As the Permit Scheme progresses the Highway Authority will continue to work with Utilities to reduce disruption wherever possible and monitor these elements.

For Year 2 210 matching locations were identified as shown on Table 54 and 55 and shows that traffic flows have decreased by 23% over the covid pandemic. In Year 2 there has been an increase in traffic speed of 8% and decrease in carbon emissions of 27%. Traffic flows and speed changes over the Covid pandemic have contributed to carbon reduction.

Table 54(a) AM 10 Carbon Emissions - DfT Traffic Count Sites Year 1

KPI 4 The number of occurrences of reducing the application period (early starts)

This KPI shows where promoters start their works without having to comply with the minimum Permit application lead-in period, commonly known as early start agreements.

Table 59 KPI 4 The number of occurrences of reducing the application period (early starts)						
Period	Year 1			Year 2		
	Early Starts Agreements			Early Starts Agreements

APPENDIX 3 – COSTS and INCOME

FEE INCOME

This permit scheme evaluation report covers the period from the 1st June 2020 to the 31st May 2021 inclusive.

The full year financial report covers the period from the 1st April 2020 to 31st March 2021 in-line with full year financial outturns.

£1,203,497 of Permit and Permit Variation fee income was received over the full financial year.

Total fee income received was higher than expected due to the increase in the volume of Utility applications.

The original expected volume of Utility Permit applications was circa 15,500 following the application of a risk managed approach. This was actually 17,500 in year 1 and increased to 18,600 in year two. This increase in volume is reflected in the subsequent revenue received.

COSTS BUDGETS AND ACTUALS

Following previous restructuring and ongoing recruitment the Permit Scheme is fully resourced and is expected to continue to be fully resourced in 2021/22.

Actual operational requirements and operating costs are now better understood and fully accounted for.

The main unexpected cost increase was in IT support which has risen from circa £50,000 to over £130,000. This has been common across the industry due to the changes to systems needed to accommodate the move to the DfT's Street Manager system.

However, overall costs were still managed within expected revenue, and this has meant that costs were less than fee income by circa £170,000 (14%). This surplus will be carried forward and expected to be absorbed by ongoing increases in IT expenditure.

The volume of all permit applications was circa 15% higher than originally anticipated for the year.

The additional spend on IT Support is expected to continue in 2021/22 due to the ongoing changes in this area.

Over the next 1 to 3 years a balanced position is expected to arise, assuming permit volumes, costs and fees return to normal levels and then remain relatively consistent.

As fee income is anticipated to be the same or less than costs over the next several years, no consideration will be given changing Permit fees in 2021/22.

Table 62 AM 11 – Costs / Budgets Against Actuals			
Start-up Cost Centre	Year 1 Risk Budget	Year 1 Actuals	Year 2 Actuals
KPI Production	£30,000	£30,000	£30,000
Invoicing	£50,000	£100,000	£100,000
IT support	£25,000	£50,758	£132,477
Unauthorised / Abandoned works	£40,000	£90,000	£90,000
Management Overhead	£25,000	£69,899	£73,377
Training	£10,000	£12,900	£0
Staff	£660,000	£482,969	£607,593
Totals	£840,000	£836,526	£1,033,447

AVERAGE PERMIT COST

By dividing the number of Utility Permits granted by the Permit Scheme cost an average cost per Permit can be calculated.

This is a useful indicator of the general scheme costs to Utilities and can be compared to other schemes to show a general financial efficiency level.

Table 63 AM 11 – Average Permit Cost			
Year 1			
	Total Permit Applications	Total Scheme Cost	Average Permit Cost
Promoters	21,841	£836,526	£38
Year 2			
	Total Permit Applications	Total Scheme Cost	Average Permit Cost
Promoters	25,253	£1,033,447	£41

BENEFIT TO COST RATIO
